

## Pan Canadian CHD surveillance program

April 22<sup>nd</sup>

**COVID-19 identified in Pediatric CHD patients in Canada:**

**2 Cases**

**0 Hospitalized**

**2 Fully Recovered (1 Fontan patient)**

Additional data of interest (data source in parentheses) and resources:

- As of April 21, there are 1019 cases of COVID-19 in patients  $\leq 19$  years in Canada (Public Health Agency of Canada)
  - o 14 pediatric patients have been hospitalized
  - o 2 pediatric patients have been admitted to ICU
  - o 0 pediatric deaths

Frederic Dallaire and colleagues have published a very helpful manuscript "Considerations for scaling down fetal echocardiograms during the COVID-19 pandemic" in CJC (here is the link to the pre proofs: [https://www.onlinecjc.ca/article/S0828-282X\(20\)30401-3/pdf](https://www.onlinecjc.ca/article/S0828-282X(20)30401-3/pdf) ) with data from their population based retrospective cohort study.
