

COVID-19 vaccine safety and people with heart conditions

People with heart conditions should be aware of the safety of the COVID-19 vaccine. These statements have been developed and supported by the Canadian Cardiovascular Society (CCS).

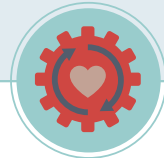

1

The CCS strongly supports the broad vaccination of all eligible Canadians against COVID-19.

2

Health Canada approved COVID-19 vaccines have been shown to be safe and effective for the majority of people with heart conditions.

3

The more people who are vaccinated, the sooner all cardiac care services can resume.

4

Prevention of infection with the COVID-19 vaccine is important for your health, including your heart health.

5

Please speak with your cardiac care provider if you have any questions or concerns regarding the COVID-19 vaccine and your heart health.

The CCS is the national professional association that represents cardiologists, cardiac surgeons, and scientists across Canada.

May 17, 2021 UPDATE

- Includes children when eligible
- Relevant for patients with heart failure, heart transplants and undergoing heart surgery
